

Tattoo aftercare instructions

Dermalize Pro

- The first Dermalize Pro dressing can be worn until it needs to be changed.
- It's fine to shower with the dressing on as it is water resistant.
- Once you have removed the first dressing, gently stretching it off horizontal to your skin, wash the area with clean hands and soapy water then thoroughly pat dry with a clean towel or hand towels.
- Apply a thin layer of Butterluxe to the tattoo and apply a fresh Dermalize Pro dressing.
- You can use Dermalize Pro for up to 5 days, changing dressings when you deem it necessary.
- If Dermalize is hard to pull off the skin, let some warm water run under the tattoo film so that the glue softens and removal of the film is easier.
- Once finished using Dermalize, continue to apply Butterluxe or a natural moisturiser, such as coconut oil, until your tattoo has finished healing. Regularly moisturise to keep your ink looking it's best. Do not let your tattoo dry out.
- Don't soak your tattoo in the shower or bath while it is healing.
- Don't pick your tattoo, even if it scabs.
- Don't go swimming or use a sun bed until your tattoo is completely healed.
- Do not follow any aftercare instructions besides these.
- Avoid alcohol for the 24 hours preceding and following your tattoo session.
- Treat as a wound i.e. keep it clean and protected.
- Keep your tattoo out of the sun until it is completely healed and then use factor 50 sunblock on your ink whenever it is exposed.
- Your tattoo will be finished healing 4 to 8 weeks after the session.
- Any problems give us a call - 07572 223961

Cling film

- The first application of cling film can be worn for a maximum of 24 hours.
- Once you have removed the first application, gently wash the area with clean hands and soapy water then thoroughly pat dry with a clean towel or hand towels.
- Apply a thin layer of Butterluxe to the tattoo and apply a fresh covering of cling film.
- You can use cling film for up to 7 days, changing when you deem it necessary.
- Once finished using cling film, continue to apply Butterluxe or a natural moisturiser, such as coconut oil, until your tattoo has finished healing. Regularly moisturise to keep your ink looking it's best. Do not let your tattoo dry out.
- Don't soak your tattoo in the shower or bath while it is healing.
- Don't pick your tattoo, even if it scabs.
- Don't go swimming or use a sun bed until your tattoo is completely healed.
- Do not follow any aftercare instructions besides these.
- Avoid alcohol for the 24 hours preceding and following your tattoo session.
- Treat as a wound i.e. keep it clean and protected.
- Keep your tattoo out of the sun until it is completely healed and then use factor 50 sunblock on your ink whenever it is exposed.
- Your tattoo will be finished healing 4 to 8 weeks after the session.
